

Help make the Cold War hot to kids!

Project Title	Help make the Cold War hot to kids!
Project Summary	Work for the Minuteman Missile National Historic Site from home. Interns will create several different 30 minute Distance Learning education programs for grades 4-12
Country	United States

Project Description

In our present economy it's difficult for kids to visit parks let alone parks thousands of miles away, but with today's technology students from around the world can visit National Parks from their classrooms. Through the Distance Learning program, they learn about what makes parks special, have conversations with Park Rangers, visit museums, and visit wild places through their internet connection. The Minuteman Missile National Historic Site is looking for a few interns to help design and create several 30 minute Distance Learning education programs for grades 4 -12. The programs can be focused on the history, culture, science, technology, and engineering related to the Minuteman Missile program. The interns can work from home and communicate with Park Rangers via the Skype interface that is used for the programs they create.
